UNIFLEX CI 45
Universal transmitter

FEATURES

- Compact design, only 22,5 mm wide
- Clips onto top-hat DIN rail
- Plug-in screw terminals or spring-clamp connectors
- Dual-line LC display with additional display elements
- Process values always in view
- Convenient 3-key operation
- Direct communication between mounted transmitters, fieldbus connections via bus coupler
- Up to two universal inputs with high signal resolution (>15 bits)
- Universal output with high resolution (14 bits) as combined voltage/current output
- One or two relay outputs
- combined counter or frequency input, frequency output
- Quick response; only 100 ms cycle time, i.e. also suitable for fast signals
- Customer-specific linearization
- Measurement value correction (offset or 2-point)
- Min/max indicator (‘slave pointer’)
- Logical linking of digital outputs, e.g. for common alarms
- Preset for output value

APPLICATIONS

- Measurement, scaling, and separation of electrical signals, e.g. for:
  - Heat treatment plants
  - Drying equipment
  - Furnace builders
  - Metallurgy
  - Kilns
  - General machine building
  - Research and development
  - Speed control, flow measuring, event counting, energy consumption collecting
  - etc.

DESCRIPTION

UNIFLEX CI 45 transmitters are designed to give precise and cost-effective signal detection and processing tasks. Every CI 45 has at least one universal input, one universal output and a relay. Optionally, the transmitter can be fitted with an additional relay, with a second universal input and counter or frequency input. Optionally, the voltage output can also be used as frequency output.

Galvanic isolation is provided between inputs and outputs as well as from the supply voltage and the communication interfaces.

Mounting

The compact CI 45 is clipped onto a top-hat DIN rail, and can also be unmounted very simply. All connections are of the plug-in type, so that a transmitter can be replaced very quickly without disturbing the wiring.

Display and operation

The two-line LC display permits simultaneous indication of the measured value and all of the unit’s operating functions.

Moreover, a LED and 4 other display elements give a reliable indication of operating status, operating mode, and error messages.

The user-configurable engineering unit of the measured value can be included in the display. By means of the extended Operating Level, it is possible to show any signal or parameter in the 2nd display line.

Interfaces and Engineering Tools

The transmitter settings are also configurable by means of an Engineering Tool.

Via the BlueControl® software, including the transmitter simulation and especially the convenient connection via the BluePort® front interface, the
user can solve the task in hand without having to work through operating instructions. Of course, practically all settings can also be made from the device front.

Moreover, the CI 45 can exchange data with superordinate systems and PCs via an optional RS 485 interface with MODBUS RTU protocol that is fitted into the top-hat DIN rail.

Devices with option system interface can be connected via bus coupler to fieldbusses.

Password protection

If required, unauthorized access to the various Operating Levels can be prevented with a password, or an entire level can be blocked.

### TECHNICAL DATA

#### INPUTS

**Survey of inputs**

* For INP1: high-impedance, without break monitoring

** Table 3: Current and voltage input**

- External:
  - value setting: 0...100 °C
  - measured via INP2 (option)
- Break monitoring
  - Sensor current: ≤ 1 μA
  - Operating sense configurable

**Resistance thermometer (Table 2)**

- External:
  - Connection technique: 3-wire or 4-wire (not available if using INP2)
  - Lead resistance: max. 30 Ω (max. at range end)
  - Input circuit monitoring: break and short circuit
- Measurement span
  - Separated into ranges
  - Physical measurement range: 0...4,500 Ω
The BlueControl® software enables the internal characteristic curve for the KTY 11-6 temperature sensor to be adapted.

**Current and voltage measurement (Table 3)**

| Span start and span: | anywhere within the measurement range |
| Scaling: | freely selectable –1999...9999 |
| Input circuit monitoring (current): | 12.5% below span start (2 mA) |

**O₂ measuring (option)**

EMI-measuring by means of INP1 (high-impedance mV-inputs) suitable for probes with
- constant sensor temperature (heated probes), setting by means of parameter
- measured sensor temperature (non-heated probes), measuring by means of INP2

**ADDITIONAL INPUT INP2 (UNIVERSAL, OPTION)**

Resolution: >15 bits
Digital input filter: adjustable, 0.0...9,999 s
Scanning cycle: 140 ms
Linearization: as for INP1
Measurement value correction: 2-point or offset
Type: single-ended except thermocouples

**Thermocouples (Table 1)**

Cold-junction compensation
- Internal
- additional error:
  - typical: ≤± 0.5 K
  - max.: ≤ ±2.5 K
- External
  - 0...100 °C

Remaining technical data as for INP1.

**Resistive sensors (Table 2)**

Connection technique: 3-wire

**Measurement span**

Remaining technical data as for INP1.

**Current and voltage measurement (Table 3)**

Remaining technical data as for INP1 except:
- Voltage input ranges –10 / 0...+10V and -5...+5V not possible.
- Millivolt input ranges: break monitoring always active.

**CONTROL INPUT DI1**

Model with
a) Contact input
Connection of potential-free contact that is suitable for switching ‘dry’ circuits.
Switched voltage: 5 V
Switched current: 1 mA
b) Optocoupler input
For active control signals.
Nominal voltage: 24 V DC, external supply
Logic ‘0’: –3...+5 V
Logic ‘1’: 15...30 V
Current demand: max. 6 mA

**O₂ measuring (option)**

Configurable as direct or inverse switch or contact.

functions:
- Locking front operating, resetting of latched alarms, slave pointers, integrator,
- activating tare-, sample&hold function;
- switchover between inputs

**Counter input (option)**

Pulse counter for up or down counting, non-storing

active edge: configurable
Count register: 31 bit
Display range: adjustable via counter divider, 8-digit
Counter divider: adjustable, 0.1...9.999
Counter start value: adjustable
Counter end value: adjustable; signalling on
Counter processing: each 100 ms
Resetting: via front key combination, limit

**Counter input with option contact**

Count frequency, max.: 5 Hz at square 1:1
Pulse duration, min.: 100 ms

**Counter input with option optocoupler**

Count frequency, max.: 100 kHz at square 1:1
Pulse duration, min.: 5 µs
Effects to active transmitters connected to INP1, INP2 can occur.

**Frequency input (option)**

Input with option optocoupler
Frequency range: 0...100 kHz at square 1:1
Gate time: adjustable, 0.1...20s
Process value: scalable
Effects to active transmitters connected to INP1, INP2 can occur.

**OUTPUTS**

**SURVEY OF OUTPUTS**

<table>
<thead>
<tr>
<th>Output</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>OUT1 OUT2 (relay)</td>
<td>Limit contact, alarms, counter end value, errors, status messages *</td>
</tr>
<tr>
<td>OUT3 (logic)</td>
<td>Same as OUT1 and OUT2</td>
</tr>
<tr>
<td>OUT3 (continuous)</td>
<td>Analog output for display value, INP1, INP2, frequency value or counter value</td>
</tr>
<tr>
<td>Transmitter supply 13 V / 22 mA</td>
<td></td>
</tr>
</tbody>
</table>

* All logic signals can be “OR-linked”.
Output values can also be forced via interface.

**RELAY OUTPUTS OUT1, OUT2**

Type: 2 NO contacts with a common terminal
Max. contact rating: 500 VA, max. 250 V, max. 2 A at 48...62 Hz, resistive load
Min. contact rating: 6V, 1 mA DC
Switching cycles:
- for I=1A/2A: 800.000/500.000
- (at 250V AC, resistive load)

Note:
If the relays OUT1 and OUT2 are used to operate external contactors, these must be fitted with RC snubber circuits to manufacturer specifications to prevent excessive voltage peaks at switch-off.

**OUT3 AS UNIVERSAL OUTPUT**

Parallel current/voltage output with common ‘minus’ terminal (combined use only in galvanically isolated circuits).

Freely scalable
Resolution: 14 bits Dynamic response: Output follows the input:
- (step change of input signal) T90: ≤ 540 ms
- Tracking error (U): ≤ 2 %
- Residual ripple: (rel. to range end) 0...130 kHz

**Current output**
0/4...20 mA, configurable.
- short circuit proof
- Dynamic range: -0.5...23 mA

<table>
<thead>

UNIFLEX CI 45
Load: \( \leq 700 \, \Omega \)
Load effect: \( \leq 0.02\% \)
Resolution: \( \leq 1.5 \, \mu A \)
Error: \( \leq 0.1\% \)

**Voltage output**

0/2...10V, configurable  
not continuous short-circuit proof

Dynamic range: -0.15...11.5 V  
Load: \( \geq 2 \, \Omega \)  
Load effect: \( \leq 0.06\% \)  
Resolution: \( \leq 0.75 \, mV \)  
Error: \( \leq 0.1\% \)
Additional error when using simultaneously the current output OUT3 as transmitter supply  
Output: 22 mA / \( \geq 13 \, V \) DC

**OUT3 as transmitter supply**

Output: \( 22 \, mA / \geq 13 \, V \) DC

**OUT3 as logic signal**

Load \( \leq 700 \, \Omega \)  
Load > 500 \( \Omega / \geq 23 \, mA \)

**Frequency output**

Output by means of voltage output  
frequency range: 0...0.25...1000 Hz (square wave)  
Output value: adjustable  
Level: \( 0 / 11.5 \, V \)

**Pulse output**

by means of integrator with automatic resetting  
frequency range: 0...5 Hz  
max. 5 \( \text{Imp/s} \)  
Puls duration: 100ms (INP1 measuring)  
140ms (INP1 + INP2 measuring)

**GALVANIC ISOLATION**

Galvanic isolation is provided between inputs and outputs as well as from the supply voltage (3-port-isolation).

**FUNCTIONS**

**Process value functions**

- Standard (process value X1)
- Optionally:
  - Difference control (X1 – X2)
  - Max. value selection from X1, X2
  - Min. value selection from X1, X2
  - Mean value selection from X1, X2
  - Switchover between X1 and X2
- Oxygen measurement* with measured or constant sensor temperature
- Counter / frequency measuring
- Process value via INP1, CJC via INP2
* Precise determination of O2 content by means of Nernst equation.

**Signal processing**

The selected input signal is converted into an analog output signal or is accessible at the interface. Depending on the selected sensor type, the following options are provided for manipulating the input signal:

- Measurement value correction (offset and 2-point)
- Scaling
- 1st-order filter with adjustable parameters (bandwidth, see below)
- Linearization with 31 segments
- \( \sqrt{x} \), with \( \sqrt{-x} = 0 \)
- \( x^2 \)
- Integrator

**Behaviour on sensor break/short circuit**

- Response of the analog output is selectable (upscale / downscale)
- Preset substitute input value, can be disabled

**Sample&Hold amplifier (option)**

The sample-and-hold amplifier stores input signals which are only present for a short time.
Typical applications are: storage of discontinuous set-values, and storage of signals in the case of a fault in the signal source.

**Tare function (option)**

Setting the tare signal the actual process value is reset to zero. Further measurements work with the offset, e.g. to subtract the tare weight.

**Min/max indicator (slave pointer)**

The minimum and maximum input values are stored in the CI 45, and can be displayed by means of the keys \( \bigtriangledown \) (minimum) and \( \bigtriangleup \) (maximum). The values are resettable.
**Display of engineering units**

The engineering unit for the measured value can either be selected from a predefined list of standard units, or it can be defined by the user (BlueControl®). The unit appears in the second line of the display.

**FILTER**

The transmitter contains a 1st-order mathematical filter with adjustable time constant and bandwidth. The bandwidth is the adjustable tolerance range within which the filter is active above and below the process value. Measurement value changes in excess of the adjusted bandwidth are not filtered.

**LIMIT VALUE FUNCTIONS**

Max, Min or Max/Min monitoring with adjustable hysteresis.

**Monitored signals**
- Process value
- Input 1
- Input 2
- counter / frequency value

**Functions**
- Input value monitoring
- Input value monitoring with storage
- Signal changes / with storage
- Reset via front panel or digital input
- Alarm discriminator adjustable from 0...9999 seconds
- Several limit values and alarm messages can be logically "OR-linked”.
- Limits can used as control signals.

**ALARMS**

Sensor break / short circuit

Depending on the selected input type, the input circuit is monitored for break, short circuit, and reversed polarity.

**MAINTENANCE MANAGER**

Display of error messages, warnings, and stored limit value messages in the error list. Messages are stored, and can be reset manually.

Possible elements in the error list:

- Sensor break, short circuit, incorrect polarity
- Stored limit values
- Heating current alarm
- Control loop alarm
- Fault during self-tuning
- E.g. Re-calibration warning (message is generated when a predefined operating time is reached)
- E.g. Maintenance interval for a switching device (message is generated when a predefined number of switching cycles is reached)
- Internal fault (RAM, EEPROM, ...)

**DISPLAY AND OPERATION**

**Display**

**LCD:**
- dual-line plus additional display elements

**Upper line:**
- 4 digits, 7-segment LCD
- for process value

**Lower line:**
- 5 digits, 14-segment LCD; configurable contents (via BlueControl®)
- Engineering unit

**Parameters**
- Extended Operating Level

**Additional display elements**

4 display elements (bars in the lower line of the LCD, identified as 1, 2, F, E)
- Bars 1 and 2: OUT1/OUT2 active or INP1/INP2 active
- Bar F: Function active (planned)
- Bar E: Entry has been made in the error list

**Dual-color indicator LEDs:**
- Green = OK
- Green, blinking = no data exchange with bus coupler (only for devices with system option)
- Red = limit value Lim1 triggered
- Red blinking = internal fault, configuration mismatch

**Operating functions**

Only three keys at the front of the CI 45 are used to operate process values, parameters, and configuration data. Different Operating Levels and selected parameters can be disabled by means of BlueControl®.
**POWER SUPPLY**

Depending on ordered version:

**AC supply**
- Voltage: 90...260 V AC
- Frequency: 48...62 Hz
- Consumption: approx. 7 VA max.

**Universal supply 24 V UC**
- AC supply: 18...30 V AC
- Frequency: 48...62 Hz
- DC supply: 18...31 V DC
- Consumption: approx. 4 VA/3 W max.

Supply only from safety electrical low voltage (SELV).

* Devices with system option: They are supplied via the bus connector from bus coupler or power supply module.

**Behaviour with power failure**

Configuration and parameter settings:
- Permanent storage in EEPROM

---

**BLUEPORT® FRONT INTERFACE**

Connection to the transmitter front via a PC adapter (see 'Accessories'). The BlueControl® software enables the CI 45 to be configured, parameters set, and operated.

---

**BUS INTERFACE (OPTIONAL)**

**RS 485**
- Connection via bus connector fitted in the top-hat rail. Screened cables should be used.
- Galvanically isolated
- Type: RS 485
- Transmission speed: 2400, 4800, 9600, 19,200, 38,400 bits/sec even, odd, none
- Parity: 1...247
- Number of transmitters per bus segment: 32

**Protocol**
- MODBUS RTU

**SYSTEM INTERFACE**

For connection to fieldbus couplers (see system components)
- Connection via bus connector fitted in the top-hat rail.
- Technical data see data sheet 9498-737-50913.

---

**ENVIRONMENTAL CONDITIONS**

**Protection mode**
- Front panel: IP 20
- Housing: IP 20
- Terminals: IP 20

**PERMISSIBLE TEMPERATURES**
- For specified accuracy: -10...55°C
- Warm-up time: < 20 minutes
- Temperature effect: ≤ 0.05% / 10 K
- Add. influence to cold junction compensation: ≤ 0.05% / 10 K

**Operating limits**
- -20...60°C
- -30...70°C

---

**Electrical connections**
- Plug-in connector strips with choice of terminal type:
  - Screw terminals or spring-clamp terminals, both for lead cross-sections from 0.2 to 2.5 mm².
  - (AVG24-12)

---

**Mounting method**
- Clip-on rail mounting (35 mm top-hat rail to EN 50 022). Locked by means of metal catch in housing base.
- Close-packed mounting possible.

**Weight**
- 0.18 kg

---

**CERTIFICATION**
- CE certified
- UL / cUL certified (applied for)

---

**ACCESSORIES**

**BlueControl® (Engineering Tool)**
- PC program for configuring, parameter setting, and operating (commissioning) the CI 45 transmitter. Moreover, all settings are saved and can be printed, if required.
- Depending in version, a powerful data acquisition module with trend graphics is available.

**Show/hide function**
- The BlueControl® software enables any number of parameters and configuration setting to be shown/hidden.

---

**Simulation function**
- The built-in simulation serves to test the settings.
Import function
Engineerings of UNIFLEX CI/CB created by engineering tool ET/Uniflex can be read and transformed if possible.

Software requirements:
Windows 95/98/NT/2000/XP

Configuration settings made only via the BlueControl® software (not via the transmitter's front keys)

- Customer-specific linearization
- Enable forcing for inputs and outputs
- Setting the limits for operating hours and switching cycles
- Switch-over to 60 Hz mains frequency
- Blocking operator functions, Operating Levels, and password definition
- Text setting
- Definition of the display contents

Hardware requirements:
A special PC adapter (see ‘Accessories’) is required for connecting to the transmitter.

Updates and demo software from: www.pma-online.de

* Option package 1: additional universal input INP2; plus: Hz-measuring, counter input, functions tare, sample&hold, integrator
** Option package 2: additional to option package 1: Digital input as optocoupler, frequency input / output
*** applied for

**Standard accessories:**
- Operating notes
- Devices with ‘Interface’ option: bus connector for fitting into top-hat rail

**Please also order the associated documentation:**
(as separate item)
